Welcome to the new MongoDB NYC Office

MongoDB Code of Conduct

https://www.mongodb.com/community-code-of-conduct

We expect these guidelines to be followed by all community members, employees, customers, partners, MUG leaders, and event participants.

- **Be positive.** Interactions should be positive, respectful and helpful. If someone lacks knowledge in a particular area, we should aim to educate and collaborate.
- **Be respectful.** MongoDB is dedicated to providing a harassment-free community for everyone regardless of gender, sexual orientation, disability, physical appearance, body size, race, or religion. We do not tolerate harassment in any form.
- **Be considerate.** Communication within our community should be appropriate for a professional audience including people of many different backgrounds, experiences, and beliefs. Sexual language and imagery is not appropriate within any MongoDB online forum, conference talk, MongoDB User Group, or MongoDB event.

Community members violating these rules will be asked to leave.

Thank you for helping make this a welcoming, friendly community for all.

Contact Information

If you see any violations of the above or have any other concerns, please report it using the following email alias: community-conduct@mongodb.com.

New Meetup Schedule

MUGs will be held on the 3rd Tuesday of the Month

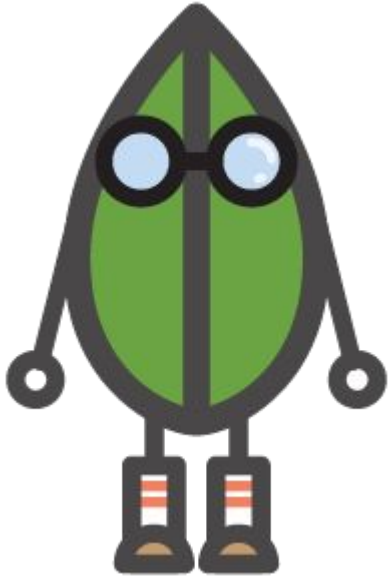
RSVPs will open 3 weeks before at 11am

RSVPs will close the Monday before at 11am

You must RSVP with your real first and last name and have a government-issued ID to enter the MongoDB offices.

Help us make this meetup great! Provide feedback using Meetup

https://www.meetup.com/New-York-MongoDB-User-Group/



Next MUG: October 23

Yes, that's the 4th Tuesday

RSVPs will open October 2 at 11:00am

We are looking for community speakers

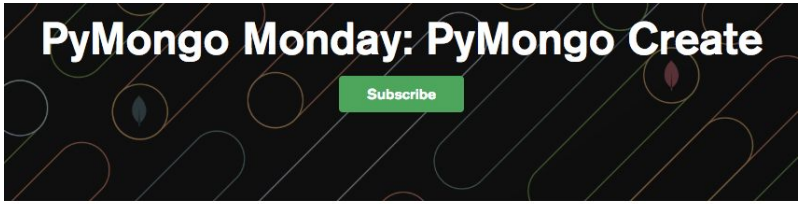
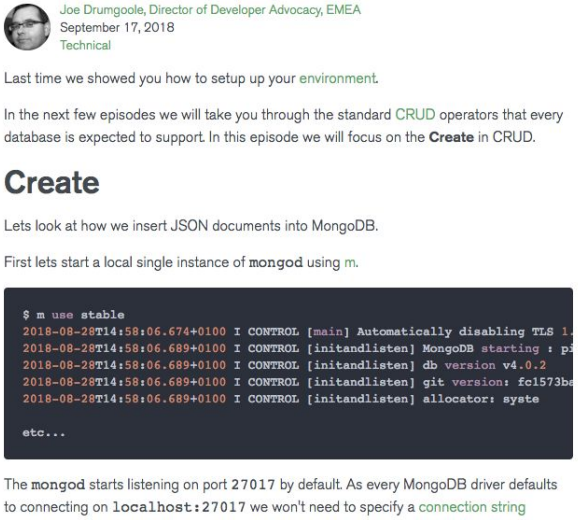
PyMongo Monday: A blog series by Joe Drumgoole

https://www.mongodb.com/blog/

Introduces developers to programming MongoDB using the Python programming language.

New post every Monday





Joe Drumgoole, Director of Developer Advocacy, EMEA
September 17, 2018
Technical

Last time we showed you how to setup up your environment.

In the next few episodes we will take you through the standard CRUD operators that every database is expected to support. In this episode we will focus on the **Create** in CRUD.

Create

Lets look at how we insert JSON documents into MongoDB.

First lets start a local single instance of **mongod** using m.

```
$ m use stable
2018-08-28T14:58:06.674+0100 I CONTROL [main] Automatically disabling TLS 1.
2018-08-28T14:58:06.689+0100 I CONTROL [initandlisten] MongoDB starting : pi
2018-08-28T14:58:06.689+0100 I CONTROL [initandlisten] db version v4.0.2
2018-08-28T14:58:06.689+0100 I CONTROL [initandlisten] git version: fc1573ba
2018-08-28T14:58:06.689+0100 I CONTROL [initandlisten] allocator: syste

etc...
```

The **mongod** starts listening on port **27017** by default. As every MongoDB driver defaults to connecting on **localhost:27017** we won't need to specify a connection string
